Debian 13 aka. Trixie

Fixes

- Stromverbrauch im Schlafmodus mit einer Samsung 990 Evo NVMe

```
sudo su
nano /etc/default/grub
# Zeile die mit [GRUB_CMDLINE_LINUX_DEFAULT=] beginnt finden und
[nvme.noacpi=1] zu den bestehenden Parametern hinzufügen
GRUB_CMDLINE_LINUX_DEFAULT="quiet splash nvme.noacpi=1"
#
update-grub
```

Firmware Updates

Um die Firmware einzelner Komponenten wie z.B. der SSD oder der Docking Station zu aktualisieren gibt es den Firmware Update Manager `fwupdmgr`.
Mit den folgenden Kommandos fürht man ein Update durch:

```
# Listet alle erkannten Geräte auf.
sudo fwupdmgr get-devices

# Aktualisiert die Datenbank via Linux Vendor Firmware Service
sudo fwupdmgr refresh

# Verfügbare Updates anzeigen
sudo fwupdmgr get-updates

# Updates herunterladen und Firmware aktualisieren
sudo fwupdmgr update

# Dienst stoppen oder starten
sudo service fwupd [stop|start]
```

System-Tools

.desktop

Quellen:

- https://wiki.ubuntuusers.de/.desktop-Dateien/
- https://specifications.freedesktop.org/desktop-entry-spec/latest/example.html

Restart des laufenden Desktops:
Bei GNOME geht das mit den Tasten Alt + F2 , und dann ein kleines R eingeben und mit ⏎ abschließen.

Beispiel `*.desktop` Datei:

org.freecad.FreeCAD.desktop

```
[Desktop Entry]
Name=FreeCAD
Comment=Feature-basierter parametrischer Modellierer
GenericName=CAD Application
Exec=/usr/bin/flatpak run --branch=stable --arch=x86_64 --
command=FreeCAD --file-forwarding org.freecad.FreeCAD - --single-
instance @@ %F @@

```

Systembasis

Quelle(n):

- https://wiki.magenbrot.net/books/distributionen/page/vorlage-fur-apt-sourceslist-aktuell-debian-

trixie

Liste der Paketquellen auf das neue Format umstellen:

```
apt modernize-sources
```

- TUXEDO Software-Paketquellen hinzufügen

```
wget -O - https://deb.tuxedocomputers.com/0x54840598.pub.asc | gpg --dearmor
| sudo tee /usr/share/keyrings/tuxedo-archive-keyring.gpg > /dev/null
wget https://deb.tuxedocomputers.com/0x54840598.pub.asc
mv 0x54840598.pub.asc tuxedo-archive-keyring.gpg
cp tuxedo-archive-keyring.gpg /etc/apt/trusted.gpg.d/
#
apt-get install tuxedo-control-center
apt-get install tuxedo-drivers
apt-get install tuxedo-tomte-light
```

```
# deb cdrom:[Debian GNU/Linux 13.0.0 _Trixie_ - Official amd64 NETINST with

# This system was installed using removable media other than
# CD/DVD/BD (e.g. USB stick, SD card, ISO image file).
# The matching "deb cdrom" entries were disabled at the end
# of the installation process.
# For information about how to configure apt package sources,
# see the sources.list(5) manual.

deb https://deb.tuxedocomputers.com/debian trixie main
```

```
apt-get update && apt-get dist-upgrade
apt-get install mc synaptic aptitude cifs-utils ca-certificates davfs2
```

```
libfuse2t64 gocryptfs gparted cryptmount partitionmanager putty dosfstools
mtools fatcat fatresize curl gedit gnome-tweaks dconf-editor gnome-tweaks
nemo nemo-data nemo-fileroller nemo-compare nemo-python yaru-theme-icon
yaru-theme-gnome-shell yaru-theme-unity gnome-icon-theme gnome-brave-icon-
theme gnome-commander rsync gnome-firmware dos2unix network-manager-openvpn-
gnome openvpn-systemd-resolved network-manager-vpnc-gnome
```

Paket-Datenbank neu aufbauen:
`sudo rm /var/lib/apt/lists/*`
`sudo apt update`

Nützliche Werkzeuge

```
apt-get install openjdk-21-jdk kdiff3 krename qtqr mediainfo mediainfo-gui
texlive texlive-lang-german texlive-latex-extra texmaker sqlitebrowser
```

Caja

Caja ist die Nemo Alternative aus der Linux-Mint Welt 

```
su
apt-get install caja caja-actions caja-actions-common caja-common caja-
extensions-common caja-image-converter caja-mediainfo caja-open-terminal
caja-rename
```

User -> ''sudo''

```
su -
usermod -aG sudo <username>
echo "<username>  ALL=(ALL:ALL) ALL" >> /etc/sudoers
apt install sudo
```

GoCryptFS

Zum Einbinden mit GoCryptFs verschlüsselter Verzeichnisse muss der Parameter „user_allow_other“ in der Datei `/etc/fuse.conf` eingetragen sein:

```
su
echo "user_allow_other" >> /etc/fuse.conf
```

Konfiguration

```
# init and use it:
mkdir ~/.gocryptfs ~/Chr_decrypt
gocryptfs -init ~/.gocryptfs
```

Autostart@Login

```
cp ./local/share/applications/MyMounts.desktop ./config/autostart/
chmod +x ./config/autostart/MyMounts.desktop
# disable the following lines by adding '#':
#  #Actions=...
#  #[Desktop ...
#  #Name= ...
```

Flatpak installieren und aktivieren

Flatpak ist eine Sandbox-Umgebung, d.h jede darin installierte Applikation läuft für sich (gekappselt) und hat, ohne Änderungen der Konfiguration (siehe `Flatseal`), keinen Zugriff auf z.B. Systemdienste, Geräte, oder das Home-Verzeichnis.

```
su
apt-get update && apt-get dist-upgrade
apt-get install flatpak gnome-software-plugin-flatpak
flatpak remote-add --if-not-exists flathub
https://dl.flathub.org/repo/flathub.flatpakrepo
```

Flatpak Pakete suchen
Flatpak Doku

Installierte Flatpak Pakete anzeigen: `flatpak list`
Pakete entfernen: `flatpak uninstall org.mozilla.Thunderbird`

Flatseal

Individuelles Rechte-Management mit Flatseal:

```
flatpak install flathub com.github.tchx84.Flatseal
```

Flatseal legt individuelle Konfigurationen unter

~/.local/share/flatpak/overrides/<Paketname> ab.

WebDAV

```
su -
usermod -aG davfs2 <benutzername>
```

KeepassXC

```
flatpak install flathub org.keepassxc.KeePassXC
```

GNOME Shell Erweiterungen

Unterstützung für GNOME Shell Erweiterungen installieren:

```
apt-get install gnome-shell gnome-shell-common gnome-shell-extension-apps-
menu gnome-shell-extension-auto-move-windows gnome-shell-extensions gnome-
shell-extension-desktop-icons-ng gnome-shell-extension-drive-menu gnome-
shell-extension-gpaste gnome-shell-extension-launch-new-instance gnome-
shell-extension-light-style gnome-shell-extension-manager gnome-shell-
extension-native-window-placement gnome-shell-extension-places-menu gnome-
shell-extension-prefs gnome-shell-extension-screenshot-window-sizer gnome-
shell-extension-status-icons gnome-shell-extension-system-monitor gnome-
shell-extension-tiling-assistant gnome-shell-extension-user-theme gnome-
shell-extension-window-list gnome-shell-extension-windows-navigator gnome-
shell-extension-workspace-indicator gnome-shell-extensions gnome-shell-
extensions-common gnome-shell-extensions-extra yaru-theme-gnome-shell gnome-
browser-connector gnome-extra-icons
```

Via `Erweiterungs-Manager` (gnome-shell-extension-manager) folgende GNOME Shell Erweiterungen installieren:

- Apps Menu
- Bluetooth Battery Meter
- Dash to Dock (by michele_g)
- Desktop Icons NG (DING) (by rastersof)
- Edit Desktop Files (.desktop)
- GSConnect (by dlandau)
- Lock Keys (by kazimieras.vaina)
- Net speed Simplified (by Prateek SU)
- Open Bar (by x10shun)
- Places Status Indicator
- Quick Settings Audio Panel
- Removable Drive Menu/
- Simple net speed (by bijignom) inkompatibel, 08/2025
- System Monitor (by fmuellner)

- Top Bar Organizer (zum Verschieben der LAN IP Anzeige in den linken Bereich)
- User Themes
- Just Perfection (by JustPerfection)

Pimp my Desktop - Conky

- https://github.com/brndnmtthws/conky
- conky.cc

```
cat .conkyrc
-- Conky, a system monitor https://github.com/brndnmtthws/conky
--
-- This configuration file is Lua code. You can write code in here, and it
will
-- execute when Conky loads. You can use it to generate your own advanced
-- configurations.
--
-- Try this (remove the `--`):
--
--   print("Loading Conky config")
--
-- For more on Lua, see:

https://download.virtualbox.org/virtualbox/7.2.0/virtualbox-7.2_7.2.0-170228
~Debian~trixie_amd64.deb
wget
https://download.virtualbox.org/virtualbox/7.2.0/Oracle_VirtualBox_Extension
_Pack-7.2.0.vbox-extpack
sudo su
apt-get install libqt6help6 gcc make perl linux-headers-amd64 linux-
headers-6.12.41+deb13-amd64
dpkg -i virtualbox-7.2_7.2.0-170228~Debian~trixie_amd64.deb
```

Wine32/64

```
sudo
dpkg --add-architecture i386
apt update
```

```
apt install wine wine32 libwine:i386 fonts-wine
```

GUIscrcpy

Um der `scrcpy` oder per `GUIscrcpy` auf ein Android Smartphone zugreifen zu können, muss bei diesem zuvor der Debug-Modus aktiviert werden. Dazu müssen die sog. Entwickleroptionen freigeschaltet werden. Soll der Zugriff nur über USB erfolgen, reicht die Freigabe von „Debugging über USB“ aus. Es geht drahtlos etwas komfortabler über WLAN mit „Debugging über WLAN“.

```
sudo su
apt-get install adb
exit
flatpak install flathub in.srev.guiscrcpy
```

Multimedia

VLC

Konfig-Datei: `~/.var/app/org.videolan.VLC/config/vlc/`

```
flatpak install flathub org.videolan.VLC
```

MediathekViewer

Konfig liegt unter: `~/.var/app/de.mediathekview.MediathekView/config/mediathek3/`

```
flatpak install flathub de.mediathekview.MediathekView
```
